ACKNOWLEDGEMENTS

The primary guiding force in my life has been a continuous, but nowhere “differentiable”, faith in the Divine. To that loving and compassionate entity, I dedicate all the bouquets and brickbats that come my way, metaphorical or otherwise.

The writing of this dissertation has drawn upon the support and encouragement of a multitude of people whom I would like to thank. First and foremost, I would like to thank my guide, Dr Hari Baskar, Associate Professor at the Department of Mathematics and Statistics, CHRIST (Deemed to be University), Bengaluru. He has been a repository of patience and calmness and discussions with him have always been an enjoyable experience.

To the institution, CHRIST (Deemed to be University), Bengaluru that allowed me to carry out my doctoral work smoothly, I am indebted. My heartfelt gratitude in this regards to the honourable Vice Chancellor of Christ University, Dr Fr Thomas C Mathew, CMI and also to the Pro-Vice Chancellor, Dr Fr Abraham V M, CMI. Many thanks are also due to the management of CHRIST,(Deemed to be University) with a special nod to the registrar, Dr Anil Joseph Pinto.

My fervent appreciation is due to Prof.S Gudennavar, Associate Director, Center for Research, CHRIST (Deemed to be University) for pushing me to do better and also for his help in almost all matters related to my doctoral work. I would also like to acknowledge Prof. Tony Sam George, Additional Director, Center for Research and indeed the entire Center for Research at CHRIST for smooth official support.

I am also grateful to the Department of Mathematics and Statistics
and the wonderful faculty members, especially Dr Fr Joseph Varghese, Prof Pranesh and the HOD, Prof. T V Jospeh for providing me a amiable work environment. Many thanks are also due to the Library staff for their support.

I count myself fortunate to acknowledge all my teachers and other well-wishers who have helped shape my formative years in academia. I am thankful to my teacher, Prof H G Nagaraja, HOD, Department of Mathematics, Central College, Bangalore for initiating me to the fascinating field of differential geometry. Prof P G Siddeshwara, Department of Mathematics, Jnana Bharathi, Bangalore has been an extraordinary source of support to me ever since my post graduate days and I express my utmost gratitude to him. Prof C S Aravinda, TIFR-CAM, Bengaluru has been another inspiring figure in my life and I feel privileged to be in his company.

My experience at Christ has been made all the more memorable due to the many kind friends I have been lucky enough to be with. I would like to thank Mr. Suman Bharadwaj and Ms Rekha Ahuja for all their help during the course of my doctoral work.

On a personal note, my heartfelt regards to my wife (who also proofread my thesis) and my dear parents for their patience and encouragement in times of depression and frustration.

Vishesh S Bhat
